# Returns by Style

Charts reflect index levels (price change only). All returns and annotations reflect total return, including dividends.

**1Q 2012**

	Value	Blend	Growth
Large	11.1%	12.6%	14.7%
Mid	11.4%	12.9%	14.5%
Small	11.6%	12.4%	13.3%

**2011**

	Value	Blend	Growth
Large	0.4%	2.1%	2.6%
Mid	-1.4%	-1.5%	-1.7%
Small	-5.5%	-4.2%	-2.9%

**Since Market Peak (October 2007)**

	Value	Blend	Growth
Large	-10.6%	-0.7%	12.1%
Mid	3.4%	7.3%	10.4%
Small	-0.1%	4.6%	8.9%

**Since Market Low (March 2009)**

	Value	Blend	Growth
Large	122.9%	122.0%	128.7%
Mid	164.0%	159.0%	155.2%
Small	146.9%	152.1%	156.9%

Source: Russell Investment Group, Standard & Poor's, FactSet, J.P. Morgan Asset Management.

All calculations are cumulative total return, including dividends reinvested for the stated period. Since Market Peak represents period 10/9/07 – 12/31/11, illustrating market returns since the most recent S&P 500 Index high on 10/9/07. Since Market Low represents period 3/9/09 – 12/31/11, illustrating market returns since the S&P 500 Index low on 3/9/09. Returns are cumulative returns, not annualized. For all time periods, total return is based on Russell-style indexes with the exception of the large blend category, which is reflected by the S&P 500 Index. Past performance is not indicative of future returns.

Data are as of 3/31/12.

Source: Standard & Poor's, Russell Investment Group, FactSet, J.P. Morgan Asset Management.

All calculations are cumulative total return, not annualized, including dividends for the stated period. Since Market Peak represents period 10/9/07 – 3/31/12. Since Market Low represents period 3/9/09 – 3/31/12.

Forward P/E Ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next twelve months (NTM), and is provided by FactSet Market Aggregates. Trailing P/E ratios are bottom-up values defined as month-end price divided by the last twelve months of available reported earnings. Historical data can change as new information becomes available. Note that P/E ratios for the S&P 500 may differ from estimates elsewhere in this book due to the use of a bottom-up calculation of constituent earnings (as described) rather than a top-down calculation. This methodology is used to allow proper comparison of sector level data to broad index level data. Dividend yields are bottom-up values defined as the annualized value of the most recent cash dividend as a percent of month-end price. Beta calculations are based on 10 years of monthly price returns for the S&P 500 and its sub-indices.

Past performance is not indicative of future returns.

Data are as of 3/31/12.

Market Cap is a bottom-up weighted average based on share information from Compustat and price information from FactSet's pricing database as provided by Standard & Poor's and Russell Investment Group, respectively. Dividend Yield is calculated based on the trailing 12 months of dividends and is provided by FactSet's pricing database for S&P and Dow Indexes and Russell for the Russell Indexes. Forward P/E is a bottom-up calculation based on the most recent S&P 500 price, divided by consensus estimates for earnings in the next twelve months (NTM), and is provided by FactSet Market Aggregates. Top 10 represents summed benchmark weight of ten largest stocks in respective index. Bottom 100 represents summed benchmark weight of 100 smallest stocks in respective index. \*Lipper mutual fund size parameters are used for illustrative purposes only and are hypothetical distributions based on Lipper mutual fund categories. As of November 2011, Lipper defines large as market cap over \$11.7 billion, small as less than \$4.1 billion and mid as all values in between. The number of holdings as of 3/31/12 are – Russell 1000: 977; Russell Mid Cap: 779; Russell 2000: 1,941; Russell 3000: 2,918. Data are as of 3/31/12.

# S&P 500 Index at Inflection Points

Source: Standard & Poor's, First Call, Compustat, FactSet, J.P. Morgan Asset Management.

Dividend yield is calculated as the annualized dividend rate divided by price, as provided by Compustat. Forward Price to Earnings Ratio is a bottom-up calculation based on the most recent S&P 500 Index price, divided by consensus estimates for earnings in the next twelve months (NTM), and is provided by FactSet Market Aggregates. Returns are cumulative and based on S&P 500 Index price movement only, and do not include the reinvestment of dividends. Past performance is not indicative of future results.

Data are as of 3/31/12.

# Equity Scenarios: Bull, Bear and In-between

## S&P 500 Index: Return Needed to Reach 2007 Peak

Analysis as of Mar. 31, 2012. Index has risen 108.0% since low of 677.

## Bear Market Cycles vs. Subsequent Bull Runs

Market Peak	Market Low	Bear Market Return	Length of Decline	Bull Run	Length of Run	Yrs to Reach Old Peak
5/29/46	5/19/47	-28.6%	12	257.6%	122	3.1 yrs

<b>Average:</b>		<b>-35.0%</b>	<b>14 mo's</b>	<b>176.0%</b>	<b>68 mo's</b>	<b>2.2 yrs</b>

Source: Standard & Poor's, FactSet, J.P. Morgan Asset Management.

(Left) Data assume 2.0% annualized dividend yield. Implied values reflect the average geometric total returns required for the S&P 500 to reach its 10/9/07 peak of 1,565 over each stated time period. Chart is for illustrative purposes only. Past performance does not guarantee future results.

(Right) A bear market is defined as a peak-to-trough decline in the S&P 500 Index (price only) of 20% or more. The bull run data reflect the market expansion from the bear market low to the subsequent market peak. All returns are S&P 500 Index returns and do not include dividends. \*Current bull run from 3/9/09 through 3/31/12. Data are as of 3/31/12.

# Investment Style Valuations

Equities

**Russell 1000 Growth P/E divided by Russell 1000 Value P/E**

**Russell 2000 P/E divided by Russell 1000 P/E**

**Current P/E vs. 20-year avg. P/E**

	Value	Blend	Growth
Large	11.9 / 14.0	13.2 / 16.7	14.7 / 21.0
Mid	13.4 / 14.0	15.0 / 16.3	16.9 / 21.9
Small	13.7 / 14.2	15.4 / 17.1	17.2 / 21.3

**Current P/E as % of 20-year avg. P/E**

*E.g.: Large Cap Blend stocks are 21.1% cheaper than their historical average.*

	Value	Blend	Growth
Large	85.1%	78.9%	69.9%
Mid	95.3%	91.7%	77.3%
Small	96.4%	89.9%	80.8%

Source: Russell Investment Group, IBES, FactSet, J.P. Morgan Asset Management.

P/E ratios are calculated and provided by Russell based on IBES consensus estimates of earnings over the next twelve months. \*Represents the Russell 1000 Growth Index P/E ratio divided by the Russell 1000 Value Index P/E ratio (top) and Russell 2000 Index P/E ratio divided by the Russell 1000 Index P/E ratio (bottom). Data reflect P/E's as provided by Russell based on IBES estimates of next twelve months' earnings.

Data are as of 3/31/12.

# Stock Valuation Measures: S&P 500 Index

## S&P 500 Index: Valuation Measures

Valuation Measure	Description	Historical Averages					
		Latest	1-year ago	3-year avg.	5-year avg.	10-year avg.	15-year avg.
P/E	Price to Earnings	13.0x	13.2x	13.0x	13.1x	14.5x	16.9x
P/B	Price to Book	2.3	2.3	2.1	2.3	2.5	3.1
P/CF	Price to Cash Flow	8.9	8.8	8.4	8.7	9.9	11.1
P/S	Price to Sales	1.3	1.3	1.1	1.2	1.3	1.5
PEG	Price/Earnings to Growth	1.6	0.9	1.0	1.2	1.2	1.2
Div. Yield	Dividend Yield	2.1%	2.0%	2.2%	2.2%	2.0%	1.9%

## Q-Ratio: Stock Price Relative to Company Assets

Price to net asset value, all U.S. non-financial corporations

## S&P 500 Earnings Yield vs. Baa Bond Yield

Source: (Top) Standard & Poor's, FactSet, J.P. Morgan Asset Management.

Price to Earnings is price divided by consensus analyst estimates of earnings per share for the next twelve months. Price to Book is price divided by book value per share. Data post-1992 include intangibles and are provided by Standard & Poor's. Price to Cash Flow is price divided by consensus analyst estimates of cash flow per share for the next twelve months. Price to Sales is calculated as price divided by consensus analyst estimates of sales per share for the next twelve months. PEG Ratio is calculated as NTM P/E divided by NTM earnings growth. Dividend Yield is calculated as consensus analyst estimates of dividends for the next twelve months divided by price. All consensus analyst estimates are provided by FactSet. (Bottom left) Q-Ratio based on data from the Federal Reserve, table B.102. \*1Q12 is an estimate provided by J.P. Morgan Asset Management as of 3/31/12. (Bottom right) Standard & Poor's, Moody's, FactSet, J.P. Morgan Asset Management. Data are as of 3/31/12.

# Earnings Estimates and Multiples

Equities

## S&P 500 Index: Forward P/E Ratio

## S&P 500 Operating Earnings Estimates

Consensus estimates of the next twelve months' rolling earnings

## Forward P/E Ratios by Sector

Averages and ranges based on monthly data from April 2002 to March 2012

### Example

Source: (Top left) Standard & Poor's, Compustat, FactSet, J.P. Morgan Asset Management. (Top right) Standard & Poor's, Compustat, FactSet, J.P. Morgan Asset Management. Earnings estimates are for calendar years and taken at quarter end dates throughout the year. (Bottom) Standard & Poor's, FactSet, J.P. Morgan Asset Management. Forward Price to Earnings is price divided by consensus analyst estimates of earnings per share for the next twelve months.

Data are as of 3/31/12.

Data are as of 3/31/12.

# P/E Ratios and Equity Returns

Equities

## P/E and Total Return Over 1-yr. Periods

Quarterly, 1Q 1952 to 1Q 2011

## P/E and Total Return Over 10-yr. Annualized Periods

Quarterly, 1Q 1952 to 1Q 2002

Source: BEA, FRB, J.P. Morgan Asset Management. Prices are based on the market value of all US corporations and include quarterly dividends. Valuation based on long-term PE ratio.

Note: Orange line denote results of linear regression with R-squared of 0.15 for 1-yr. returns (LHS) and 0.50 for 10-yr. returns (RHS).

Data are as of 3/31/12.

# Equity Correlations and Volatility

Equities

## Large Cap Stocks

### Correlations Among Stocks

## Daily Volatility of DJIA

Source: (Top) Empirical Research Partners LLC, Standard & Poor's, J.P. Morgan Asset Management. Capitalization weighted correlation of top 750 stocks by market capitalization, daily returns, 1926 – Mar. 29, 2011. (Bottom) Dow Jones, J.P. Morgan Asset Management. Data are represented as three-month moving averages of the daily absolute percentage change in the Dow Jones Industrial Average.

Charts shown for illustrative purposes only. Data are as of 3/31/12.

# Economic Growth and the Composition of GDP

## Real GDP

% chg at annual rate

## Components of GDP

4Q11 nominal GDP, billions, USD

Source: BEA, FactSet, J.P. Morgan Asset Management.

GDP values shown in legend are % change vs. prior quarter annualized and reflect revised 4Q11 GDP.

Data reflect most recently available as of 3/31/12.

### Light Vehicle Sales

Millions, seasonally adjusted annual rate

### Manufacturing and Trade Inventories

Days of sales, seasonally adjusted

### Housing Starts

Thousands, seasonally adjusted annual rate

### Real Capital Goods Orders

Non-defense capital goods orders ex. aircraft, \$ bn, seasonally adjusted

Source: (Top left) BEA, FactSet, J.P. Morgan Asset Management. (Top right) Census Bureau, FactSet, J.P. Morgan Asset Management. (Bottom left) Census Bureau, FactSet, J.P. Morgan Asset Management. (Bottom right) Census Bureau, FactSet, J.P. Morgan Asset Management. Capital goods orders deflated using the producer price index for capital goods.

Data reflect most recently available as of 3/31/12.

**Consumer Balance Sheet**

Trillions of dollars outstanding, not seasonally adjusted

**Personal Savings Rate**

Annual, % of disposable income

**Household Debt Service Ratio**

Debt payments as % of disposable personal income, seasonally adjusted

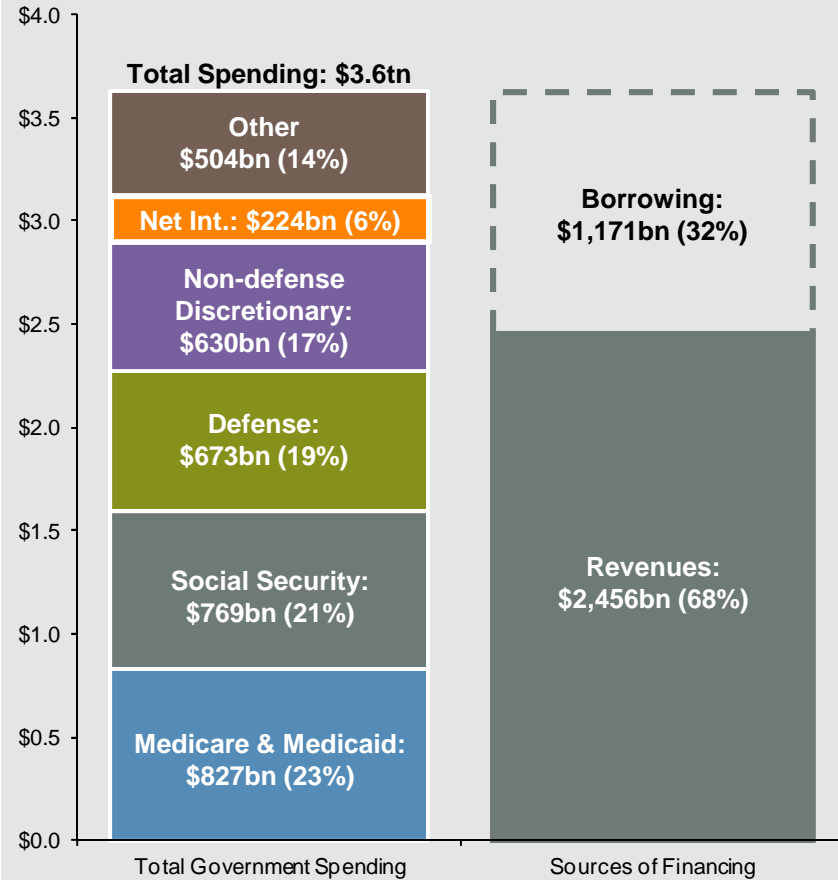

Source: (Left) FRB, J.P. Morgan Asset Management. Data includes households and nonprofit organizations. (Right) BEA, FRB, J.P. Morgan Asset Management. Personal savings rate is calculated as personal savings (after-tax income – personal outlays) divided by after-tax income. Employer and employee contributions to retirement funds are included in after-tax income but not in personal outlays, and thus are implicitly included in personal savings. Savings rate data as of February 2012. \*1Q12 Household Debt Service Ratio is J.P. Morgan Asset Management estimate. All other data are as of 4Q11.

Data reflect most recently available as of 3/31/12.

**The 2012 Federal Budget**

CBO Baseline forecast, trillions USD

**Federal Budget Surplus/Deficit**

% of GDP, 1990 – 2022\*

**Federal Debt (Accumulated Deficits)**

Net debt % of GDP, 1990 – 2022\*

Source: U.S. Treasury, BEA, CBO, J.P. Morgan Asset Management.

2011 numbers are actuals. 2012 Federal Budget is based on the CBO's March 2012 Baseline Scenario. \*The CBO's Alternative Scenario as shown in the deficit and debt charts assumes that expiring tax provisions (other than the payroll tax cut) are extended, the AMT is indexed for inflation after 2011, Medicare's payment rates for physicians' services are held constant at their current level and the automatic spending cuts required by the Budget Control Act, which are set to take effect in January 2013, do not occur (but discretionary appropriation caps stay in place).

Note: Years shown are fiscal years (Oct. 1 through Sep. 30). Top right chart displays federal surplus/deficit (revenues – outlays).

Data reflect most recently available as of 3/31/12.

# Federal Revenues, Outlays and Tax Rates

## Federal Revenues

1960 – 2012, % of GDP

## Federal Outlays

1960 – 2012, % of GDP

## Average Maximum Tax Rate on Dividends and Capital Gains

Tax Rate	40-yr. avg.	Current
Dividends	44.6%	15.0%
Capital Gains	24.7%	15.0%
Ordinary Income	47.9%	35.0%

Source: (Top Charts) CBO, White House, J.P. Morgan Asset Management. (Bottom) The Tax Foundation, J.P. Morgan Asset Management. Tax rates based on maximum U.S. individual income tax.

\*2012 revenues and outlays are estimates based on the CBO's Alternative Scenario, which was re-estimated on March 13, 2012. This scenario assumes that all expiring tax provisions (excluding the payroll tax cut) are extended, the AMT is indexed for inflation after 2011, Medicare payments are held constant at current levels and the automatic enforcement procedures specified by the Budget Control Act of 2011 do not take effect.

Data are as of 3/31/12.

**Presidential and Congressional Approval Ratings**

**S&P 500 Return by Political Control**

**Political Polarization**

% of Representatives voting with the majority of their party\*

**Real GDP Growth by Political Control**

# Consumer Price Index

## CPI and Core CPI

% chg vs. prior year, seasonally adjusted

CPI Components	Weight in CPI	12-month Change
Food & Bev.	15.3%	3.8%
Housing	41.0%	1.8%
Apparel	3.6%	4.2%
Transportation	16.9%	5.8%
Medical Care	7.1%	3.4%
Recreation	6.0%	1.0%
Educ. & Comm.	6.8%	1.9%
Other	3.4%	1.5%
<b>Headline CPI</b>	<b>100.0%</b>	<b>2.9%</b>
Less:		
Energy	9.7%	7.0%
Food	13.7%	3.9%
<b>Core CPI</b>	<b>76.6%</b>	<b>2.2%</b>

Source: BLS, FactSet, J.P. Morgan Asset Management.

CPI values shown are % change vs. 1 year ago and reflect February 2012 CPI data. CPI component weights are as of December 2011 and 12-month change reflects non-seasonally adjusted data through February 2012. Core CPI is defined as CPI excluding food and energy prices.

Data reflect most recently available as of 3/31/12.

# Returns in Different Inflation Environments - 40 years

← Rising inflation scenarios

Falling inflation scenarios →

Source: BLS, Barclays Capital, Robert Shiller, Federal Reserve, Strategas/Ibbotson, Standard and Poor's, FactSet, J.P. Morgan Asset Management.

High or low inflation distinction is relative to median CPI-U inflation for the period 1971:2 to 2011. Rising or falling inflation distinction is relative to previous year CPI-U inflation rate. Bond returns are based on the Barclays U.S. Aggregate index since its inception in 1976 and a composite bond index prior to that. Equity returns based on S&P 500 price return and annual dividend yield. Cash returns are based on the Barclays 1-3 Month T-Bill index since its inception in 1992 and 3-month T-Bill rates prior to that. Commodities returns based on GSCI.

For illustrative purposes only. Past performance is not indicative of comparable future returns.

Data reflect most recently available as of 3/31/12.

Source: U.S. Treasury, Barclays Capital, FactSet, J.P. Morgan Asset Management.

Fixed income sectors shown above are provided by Barclays Capital and are represented by – Broad Market: US Barclays Capital Index; MBS: Fixed Rate MBS Index; Corporate: U.S. Corporates; Municipals: Muni Bond Index; Emerging Debt: Emerging Markets Index; High Yield: Corporate High Yield Index. TIPS: Treasury Inflation Protection Securities (TIPS). Treasury securities data for # of issues and market value based on U.S. Treasury benchmarks from Barclays Capital. Yield and return information based on Bellwethers for Treasury securities.

Change in bond price is calculated using both duration and convexity according to the following formula:  

$$\text{New Price} = (\text{Price} + (\text{Price} * \text{-Duration} * \text{Change in Interest Rates})) + (0.5 * \text{Price} * \text{Convexity} * (\text{Change in Interest Rates})^2)$$

\*Calculation assumes 2-year Treasury interest rate falls 0.80% to 0.00% as interest rates can only fall to 0.00%.

Chart is for illustrative purposes only. Past performance is not indicative of comparable future results.

Data are as of 3/31/12.

# The Fed and the Money Supply

### Federal Funds Rate

### FOMC Projected Pace of Policy Firming

Target Federal Funds Rate at Year-End

### Excess Reserves, Monetary Base and Multiplier

### Money Supply Growth

Year-over-year growth in M2

Source: Federal Reserve, FactSet, J.P. Morgan Asset Management.

Monetary base is defined as the total amount of a currency that is either circulated in the hands of the public or in the commercial bank deposits held in the central bank's reserves. Money multiplier defined as M2 divided by the monetary base.

Data are as of 3/31/12.

### Lending Standards

Net percent of banks reporting tighter lending standards

### Consumer & Industrial Loan Demand

Net percent of banks reporting stronger demand

### Delinquency Rates

Data are as of 3/31/12.

# Diversification and the Average Investor

## Maximizing the Power of Diversification (1994 – 2011)

Traditional Portfolio

Return: 6.75%  
Standard Deviation: 10.94%

More Diversified Portfolio

Return: 7.09%  
Standard Deviation: 9.97%

(Top) Indexes and weights of the traditional portfolio are as follows: U.S. stocks: 55% S&P 500, U.S. bonds: 30% Barclays Capital Aggregate. International stocks: 15% MSCI EAFE. Portfolio with 25% in alternatives is as follows: U.S. stocks: 22.2% S&P 500, 8.8% Russell 2000; International Stocks: 4.4% MSCI EM, 13.2% MSCI EAFE; U.S. Bonds: 26.5% Barclays Capital Aggregate; Alternatives: 8.3% CS/Tremont Equity Market Neutral, 8.3% DJ/UBS Commodities, 8.3% NAREIT Equity REIT Index. Return and standard deviation calculated using Morningstar Direct.

Charts are shown for illustrative purposes only. Past returns are no guarantee of future results. Diversification does not guarantee investment returns and does not eliminate risk of loss. Data are as of 12/31/11.

## 20-year Annualized Returns by Asset Class (1992 – 2011)

(Bottom) Indexes used are as follows: REITS: NAREIT Equity REIT Index, EAFE: MSCI EAFE, Oil: WTI Index, Bonds: Barclays Capital U.S. Aggregate Index, Homes: median sale price of existing single-family homes, Gold: USD/troy oz, Inflation: CPI. Average asset allocation investor return is based on an analysis by Dalbar Inc., which utilizes the net of aggregate mutual fund sales, redemptions and exchanges each month as a measure of investor behavior. Returns are annualized (and total return where applicable) and represent the 20-year period ending 12/31/11 to match Dalbar's most recent analysis.

# Annual Returns and Intra-year Declines

## Intra-year Declines vs. Calendar Year Returns

Despite average intra-year drops of 14.5%, annual returns positive in 25 of 32 years

Source: Standard and Poor's, FactSet, J.P. Morgan Asset Management.

Returns are based on price index only and do not include dividends. Intra-year drops refers to the largest market drops over periods of 6 months or less. For illustrative purposes only.

Data are as of 3/31/12.

## Alternative Investment Returns

<b>Hedge Funds</b> (as of 12/31/11)	<b>1 year</b>	<b>3 year</b>	<b>5 year</b>	<b>10 year</b>

U.S. Private Equity Index	13.8%	7.3%	8.1%	11.6%

Source: Cambridge Associates LLC, NCREIF, CS/Tremont, J.P. Morgan Asset Management. Cambridge PE and VC data provided at no charge. Other indexes shown are unmanaged and are for illustrative purposes only. Past performance is no guarantee of future results. Returns for all periods are as of 12/31/11 with the exception of Private Equity and Venture Capital returns, which are as of 9/30/11. All returns are annualized for periods greater than 1 year. Investing in alternative assets involves higher risks than traditional investments and is suitable only for the long term. They may not be tax efficient and have higher fees than traditional investments. They may also be highly leveraged and engage in speculative investment techniques, which can magnify the potential for investment loss or gain.

\*Market Neutral returns include estimates found in disclosures.

\*\*Arbitrage is the simultaneous purchase and sale of an asset in order to profit from a difference in the price.

Data are as of 3/31/12.

# Cash Accounts

**Annual Income Generated by \$100,000 Investment in a 6-month CD**

**Cash as a % of Total Household Financial Assets**

Money Supply Component	\$ Billions	Weight in Money Supply
<b>M2-M1</b>	<b>7,565</b>	<b>76.2%</b>
Retail MMMFs	661	6.7%
Savings deposits	6,167	62.1%
Small time deposits	738	7.4%
<b>Institutional MMMFs</b>	<b>1,721</b>	<b>17.3%</b>
<b>Cash in IRA &amp; Keogh accounts</b>	<b>639</b>	<b>6.4%</b>
<b>Total</b>	<b>9,924</b>	<b>100.0%</b>

Source: Federal Reserve, St. Louis Fed, Bankrate.com, J.P. Morgan Asset Management. All cash measures obtained from the Federal Reserve are seasonally adjusted monthly numbers. All numbers are in billions of U.S. dollars.

Small-denomination time deposits are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.

Annual income is for illustrative purposes and is calculated based on the 6-month CD yield on average during each year and \$100,000 invested.

IRA and Keogh account balances at money market mutual funds are subtracted from retail money funds.

Past performance is not indicative of comparable future results.

Data are as of 3/31/12.

# Corporate DB Plans and Endowments

**Asset Allocation: Corporate DB Plans vs. Endowments**

**Defined Benefit Plans – Funded Status: S&P 500 companies**

**Pension Return Assumptions: S&P 500 companies**

Source: NACUBO (National Association of College and University Business Officers), Towers Watson, Compustat/FactSet, J.P. Morgan Asset Management. Endowments represents dollar-weighted average data of 842 colleges and universities. Pension Return Assumptions based on all available and reported data from S&P 500 Index companies. Funded Status based on 351 companies reporting pension funding status as of 3/31/11. Return assumption bands are inclusive of upper range. All information is shown for illustrative purposes only. Data are as of 12/31/10.

## J.P. Morgan Asset Management - Index Definitions

**All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.**

The **S&P 500 Index** is widely regarded as the best single gauge of the U.S. equities market. This world-renowned index includes a representative sample of 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 Index focuses on the large-cap segment of the market, with approximately 75% coverage of U.S. equities, it is also an ideal proxy for the total market. An investor cannot invest directly in an index.

The **S&P 400 Mid Cap Index** is representative of 400 stocks in the mid-range sector of the domestic stock market, representing all major industries.

The **Russell 3000 Index**® measures the performance of the 3,000 largest U.S. companies based on total market capitalization.

The **Russell 1000 Index**® measures the performance of the 1,000 largest companies in the Russell 3000.

The **Russell 1000 Growth Index**® measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 1000 Value Index**® measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

The **Russell Midcap Index**® measures the performance of the 800 smallest companies in the Russell 1000 Index.

The **Russell Midcap Growth Index**® measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values. The stocks are also members of the Russell 1000 Growth index.

The **Russell Midcap Value Index**® measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values. The stocks are also members of the Russell 1000 Value index.

The **Russell 2000 Index**® measures the performance of the 2,000 smallest companies in the Russell 3000 Index.

The **Russell 2000 Growth Index**® measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

The **Russell 2000 Value Index**® measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

The **MSCI® EAFE** (Europe, Australia, Far East) Net Index is recognized as the pre-eminent benchmark in the United States to measure international equity performance. It comprises 21 MSCI country indexes, representing the developed markets outside of North America.

The **MSCI Emerging Markets Index**™ is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. As of June 2007, the MSCI Emerging Markets Index consisted of the following 25 emerging market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Jordan, Korea, Malaysia, Mexico, Morocco, Pakistan, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey.

The **MSCI ACWI (All Country World Index) Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. As of June 2009 the **MSCI ACWI** consisted of 45 country indices comprising 23 developed and 22 emerging market country indices.

The **MSCI Small Cap Indices**™ target 40% of the eligible Small Cap universe within each industry group, within each country. MSCI defines the Small Cap universe as all listed securities that have a market capitalization in the range of USD200-1,500 million.

The **MSCI Value and Growth Indices**™ cover the full range of developed, emerging and All Country MSCI Equity indexes. As of the close of May 30, 2003, MSCI implemented an enhanced methodology for the MSCI Global Value and Growth Indices, adopting a two dimensional framework for style segmentation in which value and growth securities are categorized using different attributes - three for value and five for growth including forward-looking variables. The objective of the index design is to divide constituents of an underlying MSCI Standard Country Index into a value index and a growth index, each targeting 50% of the free float adjusted market capitalization of the underlying country index. Country Value/Growth indices are then aggregated into regional Value/Growth indices. Prior to May 30, 2003, the indices used Price/Book Value (P/BV) ratios to divide the standard MSCI country indices into value and growth indices. All securities were classified as either "value" securities (low P/BV securities) or "growth" securities (high P/BV securities), relative to each MSCI country index.

The following **MSCI Total Return Indices**™ are calculated with gross dividends:  
This series approximates the maximum possible dividend reinvestment. The amount reinvested is the dividend distributed to individuals resident in the country of the company, but does not include tax credits.

The **MSCI Europe Index**™ is a free float-adjusted market capitalization index that is designed to measure developed market equity performance in Europe. As of June 2007, the MSCI Europe Index consisted of the following 16 developed market country indices: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

The **MSCI Pacific Index**™ is a free float-adjusted market capitalization index that is designed to measure equity market performance in the Pacific region. As of June 2007, the MSCI Pacific Index consisted of the following 5 Developed Market countries: Australia, Hong Kong, Japan, New Zealand, and Singapore.

**Credit Suisse/Tremont Hedge Fund Index** is compiled by Credit Suisse Tremont Index, LLC. It is an asset-weighted hedge fund index and includes only funds, as opposed to separate accounts. The Index uses the Credit Suisse/Tremont database, which tracks over 4500 funds, and consists only of funds with a minimum of US\$50 million under management, a 12-month track record, and audited financial statements. It is calculated and rebalanced on a monthly basis, and shown net of all performance fees and expenses. It is the exclusive property of Credit Suisse Tremont Index, LLC.

The **NCREIF Property Index** is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. All properties in the NPI have been acquired, at least in part, on behalf of tax-exempt institutional investors - the great majority being pension funds. As such, all properties are held in a fiduciary environment.

The **NAREIT EQUITY REIT Index** is designed to provide the most comprehensive assessment of overall industry performance, and includes all tax-qualified real estate investment trusts (REITs) that are listed on the NYSE, the American Stock Exchange or the NASDAQ National Market List.

**All indexes are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.**

The **Dow Jones-UBS Commodity Index** is composed of futures contracts on physical commodities and represents nineteen separate commodities traded on U.S. exchanges, with the exception of aluminum, nickel, and zinc.

The **S&P GSCI Index** is a composite index of commodity sector returns representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities. The returns are calculated on a fully collateralized basis with full reinvestment. Individual components qualify for inclusion in the index on the basis of liquidity and are weighted by their respective world production quantities.

The **Barclays Capital U.S. Aggregate Index** represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities. These major sectors are subdivided into more specific indexes that are calculated and reported on a regular basis.

This **U.S. Treasury Index** is a component of the U.S. Government index.

**West Texas Intermediate (WTI)** is the underlying commodity for the New York Mercantile Exchange's oil futures contracts.

The **Barclays Capital High Yield Index** covers the universe of fixed rate, non-investment grade debt. Pay-in-kind (PIK) bonds, Eurobonds, and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included. Original issue zeroes, step-up coupon structures, and 144-As are also included.

The **Barclays Capital 1-3 Month U.S. Treasury Bill Index** includes all publicly issued zero-coupon U.S. Treasury Bills that have a remaining maturity of less than 3 months and more than 1 month, are rated investment grade, and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed rate and non convertible.

The **Barclays Capital General Obligation Bond Index** is a component of the **Barclays Capital Municipal Bond Index**. To be included in the index, bonds must be general obligation bonds rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives, are excluded from the benchmark.

The **Barclays Capital Revenue Bond Index** is a component of the **Barclays Capital Municipal Bond Index**. To be included in the index, bonds must be revenue bonds rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives, are excluded from the benchmark.

The **Barclays High Yield Municipal Index** includes bonds rated Ba1 or lower or non-rated bonds using the middle rating of Moody's, S&P and Fitch.

The **Barclays Capital Taxable Municipal Bond Index** is a rules-based, market-value weighted index engineered for the long-term taxable bond market. To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies if all three rate the bond: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate and must be at least one year from their maturity date. Remarketed issues (unless covered to fixed rate), bonds with floating rates, and derivatives, are excluded from the benchmark.

**Municipal Bond Index:** To be included in the index, bonds must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives are excluded from the benchmark.

The **Barclays Capital Emerging Markets Index** includes USD-denominated debt from emerging markets in the following regions: Americas, Europe, Middle East, Africa, and Asia. As with other fixed income benchmarks provided by Barclays Capital, the index is rules-based, which allows for an unbiased view of the marketplace and easy replicability.

The **Barclays Capital MBS Index** covers the mortgage-backed pass-through securities of Ginnie Mae, Fannie Mae, and Freddie Mac. Aggregate components must have a weighted average maturity of at least one year, must have \$250 million par amount outstanding, and must be fixed rate mortgages.

The **Barclays Capital Corporate Bond Index** is the Corporate component of the U.S. Credit index.

The **Barclays Capital TIPS Index** consists of Inflation-Protection securities issued by the U.S. Treasury.

The **J.P. Morgan EMBI Global Index** includes U.S. dollar denominated Brady bonds, Eurobonds, traded loans and local market debt instruments issued by sovereign and quasi-sovereign entities.

The **J.P. Morgan Domestic High Yield Index** is designed to mirror the investable universe of the U.S. dollar domestic high yield corporate debt market.

The **CS/Tremont Equity Market Neutral Index** takes both long and short positions in stocks with the aim of minimizing exposure to the systematic risk of the market (i.e., a beta of zero).

The **CS/Tremont Multi-Strategy Index** consists of funds that allocate capital based on perceived opportunities among several hedge fund strategies. Strategies adopted in a multi-strategy fund may include, but are not limited to, convertible bond arbitrage, equity long/short, statistical arbitrage and merger arbitrage.

\*Market Neutral returns for November 2008 are estimates by J.P. Morgan Funds Market Strategy, and are based on a December 8, 2008 published estimate for November returns by CS/Tremont in which the Market Neutral returns were estimated to be +0.85% (with 69% of all CS/Tremont constituents having reported return data). Presumed to be excluded from the November return are three funds, which were later marked to \$0 by CS/Tremont in connection with the Bernard Madoff scandal. J.P. Morgan Funds believes this distortion is not an accurate representation of returns in the category. CS/Tremont later published a finalized November return of -40.56% for the month, reflecting this mark-down. CS/Tremont assumes no responsibility for these estimates.

**Past performance is no guarantee of comparable future results.**

**Diversification does not guarantee investment returns and does not eliminate the risk of loss.**

**Bonds** are subject to interest rate risks. Bond prices generally fall when interest rates rise. The price of **equity** securities may rise, or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries, or the securities market as a whole, such as changes in economic or political conditions. Equity securities are subject to "stock market risk" meaning that stock prices in general may decline over short or extended periods of time.

**Small-capitalization** investing typically carries more risk than investing in well-established "blue-chip" companies since smaller companies generally have a higher risk of failure. Historically, smaller companies' stock has experienced a greater degree of market volatility than the average stock.

**Mid-capitalization** investing typically carries more risk than investing in well-established "blue-chip" companies. Historically, mid-cap companies' stock has experienced a greater degree of market volatility than the average stock.

**Real estate** investments may be subject to a higher degree of market risk because of concentration in a specific industry, sector or geographical sector. Real estate investments may be subject to risks including, but not limited to, declines in the value of real estate, risks related to general and economic conditions, changes in the value of the underlying property owned by the trust and defaults by borrower.

**International** investing involves a greater degree of risk and increased volatility. Changes in currency exchange rates and differences in accounting and taxation policies outside the U.S. can raise or lower returns. Also, some overseas markets may not be as politically and economically stable as the United States and other nations. Investments in **emerging markets** can be more volatile. As mentioned above, the normal risks of investing in foreign countries are heightened when investing in emerging markets. In addition, the small size of securities markets and the low trading volume may lead to a lack of liquidity, which leads to increased volatility. Also, emerging markets may not provide adequate legal protection for private or foreign investment or private property.

Investments in **commodities** may have greater volatility than investments in traditional securities, particularly if the instruments involve leverage. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Use of leveraged commodity-linked derivatives creates an opportunity for increased return but, at the same time, creates the possibility for greater loss.

NOT FDIC INSURED | NO BANK GUARANTEE | MAY LOSE VALUE

**Derivatives** may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in losses that significantly exceed the original investment. The use of derivatives may not be successful, resulting in investment losses, and the cost of such strategies may reduce investment returns.

**Price to forward earnings** is a measure of the price-to-earnings ratio (P/E) using forecasted earnings. **Price to book value** compares a stock's market value to its book value. **Price to cash flow** is a measure of the market's expectations of a firm's future financial health. **Price to dividends** is the ratio of the price of a share on a stock exchange to the dividends per share paid in the previous year, used as a measure of a company's potential as an investment.

There is no guarantee that the use of **long and short positions** will succeed in limiting an investor's exposure to domestic stock market movements, capitalization, sector swings or other risk factors. Investing using long and short selling strategies may have higher portfolio turnover rates. Short selling involves certain risks, including additional costs associated with covering short positions and a possibility of unlimited loss on certain short sale positions.
